# AMBALAVANAN M

Frontend Developer | AWS Certified Cloud Practitioner

+91 9894797490 | ambalavanan275@gmail.com | github.com/ambalavanan-m | linkedin.com/in/ambalavanan-m

## PROFESSIONAL SUMMARY

Results-driven Frontend Developer and AWS Certified Cloud Practitioner with hands-on experience in Java, Python, C++, and modern Web Technologies (HTML, CSS, JavaScript). Skilled in building scalable cloud architectures on AWS (S3, Lambda, API Gateway, CloudFront) and developing end-to-end full-stack applications integrating Machine Learning and Blockchain (Solidity). Strong foundation in Data Structures & Algorithms (DSA), OOP, DBMS, and SQL. Passionate about solving complex engineering challenges and delivering innovative, production-ready software solutions.

## TECHNICAL SKILLS

**Programming Languages:** Java, Python, C++, C, Solidity

**Web Technologies:** HTML5, CSS3, JavaScript (ES6+)

**Cloud Platforms:** AWS S3, AWS Lambda, AWS API Gateway, AWS CloudFront, AWS SageMaker

**Frameworks & Libraries:** React.js

**Databases & Concepts:** SQL, DBMS, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)

**Tools & Version Control:** Git, GitHub

**Certifications:** AWS Cloud Foundations

## PROJECTS

### Loan Approval Prediction Portal | *Python, Machine Learning, AWS SageMaker, AWS Lambda, AWS API Gateway, AWS S3, React.js*

- Designed and deployed an end-to-end ML web application to predict loan approval status using historical financial data with Linear Regression model trained on AWS SageMaker.
- Architected a serverless backend using AWS Lambda and API Gateway, reducing infrastructure management overhead and enabling auto-scaling for production traffic.
- Built a React.js frontend interface enabling real-time loan eligibility assessment, integrating directly with AWS cloud services via REST API.
- Stored and managed datasets and model artifacts on AWS S3, ensuring secure and reliable data access across all application components.

### E-Voting System Using Blockchain | *Solidity, Blockchain, HTML, CSS, JavaScript*

- Developed a decentralized e-voting application using Solidity smart contracts on the Ethereum blockchain, ensuring tamper-resistant and transparent digital election workflows.
- Implemented secure voter authentication and immutable vote recording to eliminate fraud and maintain auditability of the election process.
- Built a responsive web frontend using HTML, CSS, and JavaScript to interact with deployed smart contracts through the browser.

### Crisis Response Management System | *HTML, CSS, JavaScript*

- Built a responsive web application to streamline emergency coordination, real-time resource tracking, and crisis communication among first responders.
- Designed an intuitive JavaScript-driven interface for incident reporting, resource allocation, and status updates to improve response time during emergencies.
- Implemented dynamic UI components to support multi-user workflows for crisis management teams.

## EDUCATION

**B.Sc. Computer Science** | CGPA: 9.31 / 10 | Expected Graduation: 2027
*VIT University, Vellore*
